SERVICE OVERVIEW

# MDR for Microsoft Defender

**24x7 managed detection and response for Defender. Fully tuned, expertly managed.**

Security teams are under constant pressure to manage evolving threats with limited time and resources. While many organizations use Microsoft Defender, few have the bandwidth to continuously tune it, investigate all alerts, and act quickly.

NuHarbor's MDR for Defender offers 24x7 detection and response, purpose-built for speed, accuracy, and efficiency. We fine-tune your Defender endpoint environment to reduce false positives, enhance threat visibility, and automatically isolate threats before they spread. When deeper analysis is needed, our analysts step in to ensure every alert gets the right level of attention without overwhelming your team.

## Our approach

NuHarbor's MDR for Defender follows a proven process designed to make Defender more effective and less burdensome for your team.

1. We review every Defender alert and escalate only what matters.
2. Our automation isolates impacted endpoints and blocks lateral movement to speed containment.
3. Security analysts guide investigations and provide deeper analysis and remediation recommendations when needed.
4. We continuously tune Defender to uncover gaps, sharpen detection, and ensure the value of your alerts.
5. Reporting delivers clear, actionable insights aligned to your security and compliance needs.

## Key benefits

- Cut through noise with fewer false positives
- Improve threat visibility across your Defender environment
- Contain threats quickly with automated isolation of impacted endpoints
- Access real-time support from experienced security professionals
- Streamline compliance reporting with clear insights
- Get more value from Defender without increasing internal workload

"NuHarbor helped us tune Defender, focus on real threats, and respond faster. It's a relief knowing someone's watching when we're not."

**Get maximum protection with Microsoft Defender.**
