Security Exposure Management Quick Start

Proactive security risk reduction powered by Microsoft and NuHarbor.

As cyber threats grow in scale and sophistication, understanding and managing your attack surface is more critical than ever. NuHarbor's Microsoft Security Exposure Management (MSEM) Quick Start helps you identify, prioritize, and remediate risks using MSEM. The result is a faster, more confident path to an improved security posture.

Our approach

NuHarbor simplifies the path from risk identification to remediation.

1. Conduct an initial security posture review using MSEM's attack surface insights. This includes identifying misconfigurations, unpatched vulnerabilities, and exposure risks across endpoints, identities, and cloud workloads.
2. Receive a comprehensive risk score breakdown and prioritization, highlighting high-impact gaps that require immediate attention.
3. Prioritize and address gaps consistent with business and stakeholder needs.

What you get

Initial environment assessment: Identify gaps, misconfigurations, and vulnerabilities to ensure a solid security foundation.

Alert-sensitivity and noise reduction: Recommend threshold tuning to reduce false positives and detect critical threats.

Automated response and access control: Supply automated workflows for low-priority incidents, streamlining security operations.

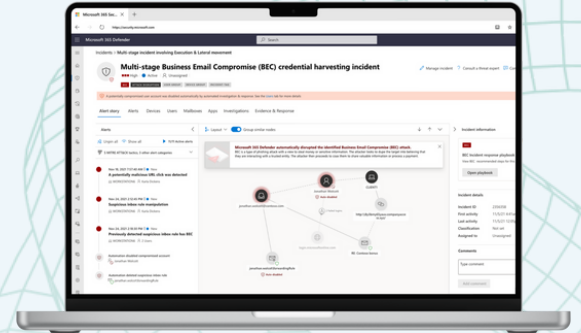

Configuration validation: Optimize Microsoft Defender settings and verify correct application of security policies.

Behavioral baseline: Establish normal behavior baselines to identify anomalies and potential threats effectively.

"NuHarbor quickly showed us where we were exposed and what to fix first. It was clear, actionable, and made a real impact."

Key benefits

Improve security posture by addressing vulnerabilities and misconfigurations to reduce risk

Increase efficiency through streamlined security operations and prioritized risk management

Gain peace of mind with NuHarbor expertise and Microsoft technology defending against emerging threats

Get started with NuHarbor's MSEM Quick Start today.
