nuHarbor

Service Overview

Microsoft Purview Quick Start

See what's at risk and how to fix it.

Though widely licensed, Purview often goes unused by busy cybersecurity teams. The result: sensitive data remains exposed and risks go unmanaged. In an era of AI and expanding data access, knowing where your sensitive data lives and how it's exposed has never been more critical. Without that visibility, the risks of accidental or intentional disclosure stay unmanaged and untracked.

nuHarbor's Purview Quick Start activates the capabilities you already own. With expert guidance and a focused plan of action, we help you increase visibility, reduce risk, improve governance, and support compliance.

Our Approach

We provide a fast, focused, one-time engagement that delivers immediate insights into areas of sensitive data exposure, followed by clear and actionable steps to improve going forward. No long-term commitment or new licensing required. Ongoing support is available anytime if needed.

1. Identify the networks, systems, and data sources for assessment.
2. Configure and run Purview to scan the assets in your environment to find where sensitive data lives, what types of data are involved, and where protections are missing.
3. Receive a prioritized set of recommendations and set up reporting in Purview to maintain visibility and measure progress.
4. Transition to Managed Services (optional) for continued expert support. Our team extends Purview visibility, monitoring, and governance as your needs evolve.

Microsoft Purview Quick Start highlights and benefits

What you get

- Visibility into private and sensitive data
- Identification of risks, blindspots, and misclassified or unclassified information
- A running Purview platform, configured to monitor risk and support compliance
- A prioritized, expert-driven plan for ongoing management and immediate remediation

Key benefits

- Maximize the value of your existing Microsoft investment
- Get rapid insights and prioritized actions without a long-term contract
- Move from assumptions to real visibility and measurable actions
- Strengthen compliance and governance in an AI-driven world
